WPC Wall Boards product introduction

WPC Wall Boards Features

1. waterproof

Bamboo fiber wallboard is more suitable for humid areas, due to its waterproof and moisture-proof performance is better, moisture vapor and other difficult to soak, can keep the room dry and comfortable, no leakage of water, but also can get rid of the wall generator change trouble.

2. Heat preservation and heat insulation

Compared with ordinary wall decoration materials, the room temperature of bamboo fiber wallboard installation differs by 7 degrees and that of painted walls by 10 degrees. Its unique heat insulation performance, can achieve obvious energy-saving effect.

3. Simple installation

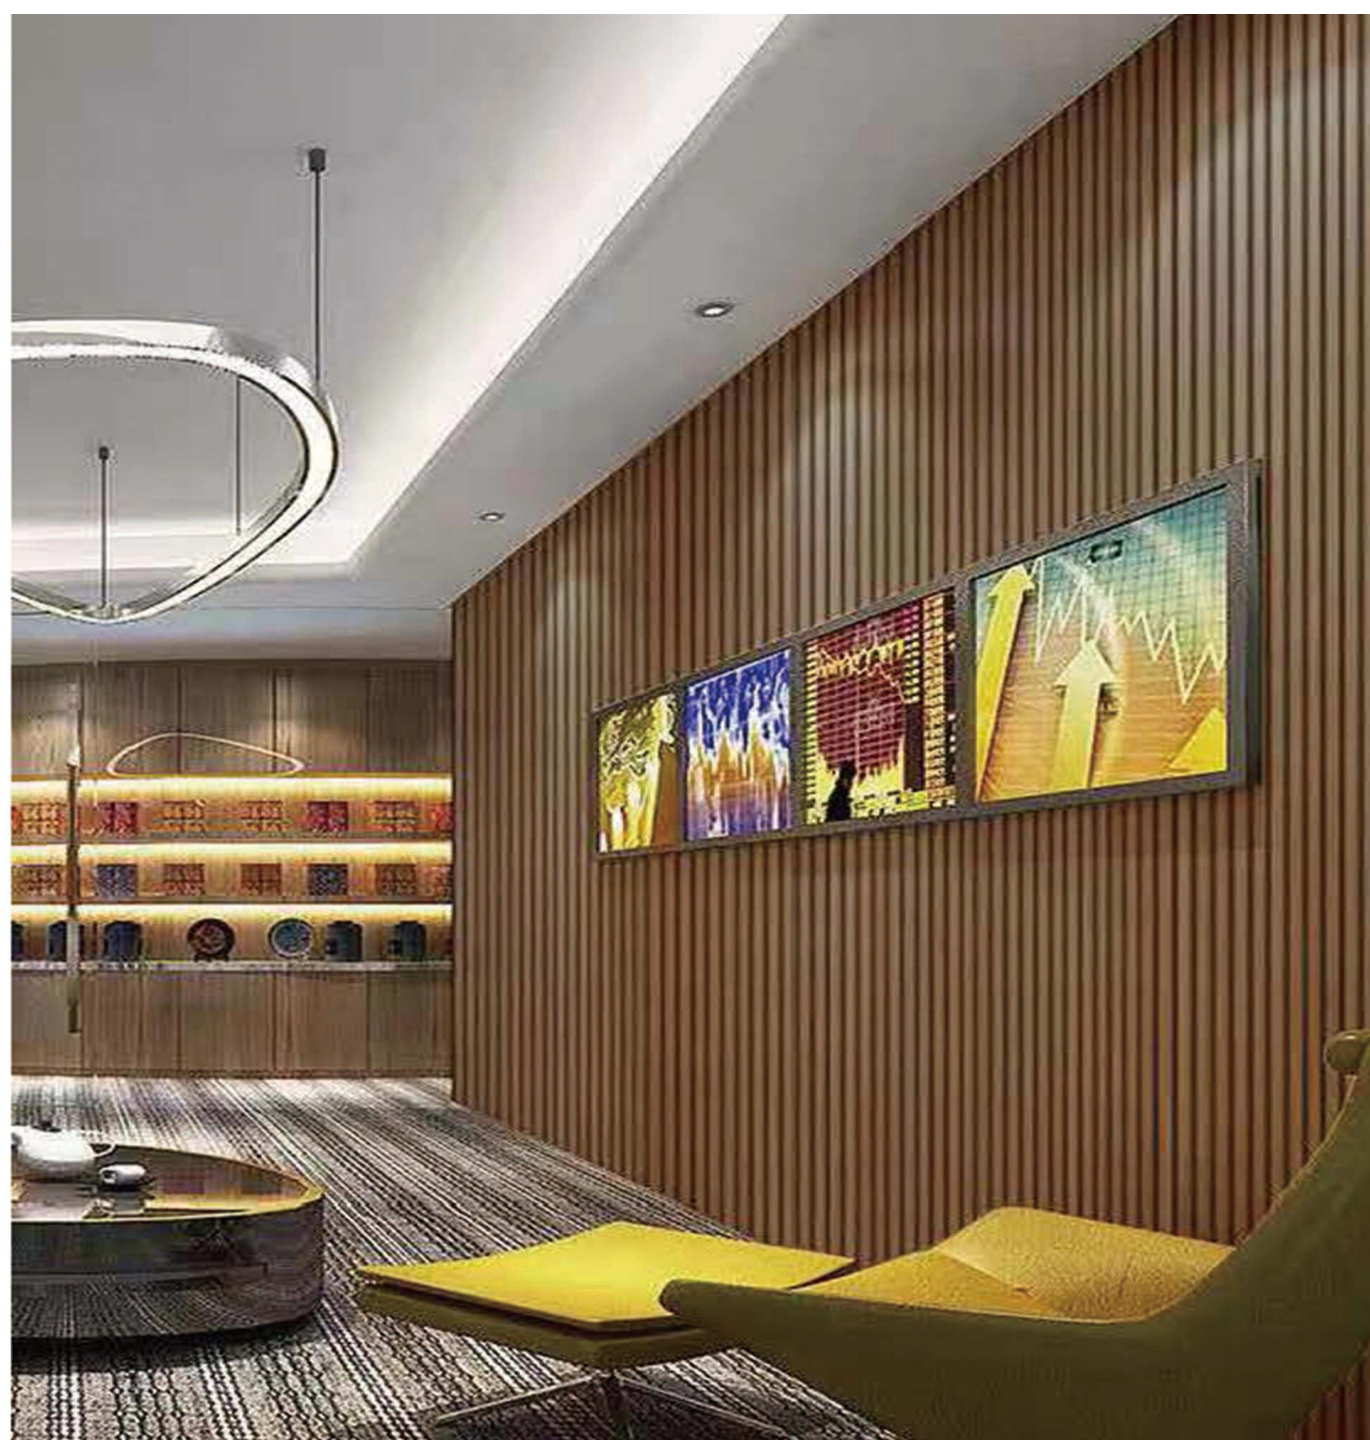

The traditional gusset plate installation method is adopted in the design, which can be directly bent, combined and folded, and the blank wall is directly installed. The decoration cycle is short, time saving and labor saving, and one step in place.

4. Easy to clean

Need to clean, can be swabbed directly with water, and not easy to bubble, deformation.

5. Low carbon environmental protection

Do not contain paint, petty use wake up, decorate finish without peculiar smell, also won't cause harm to human body.

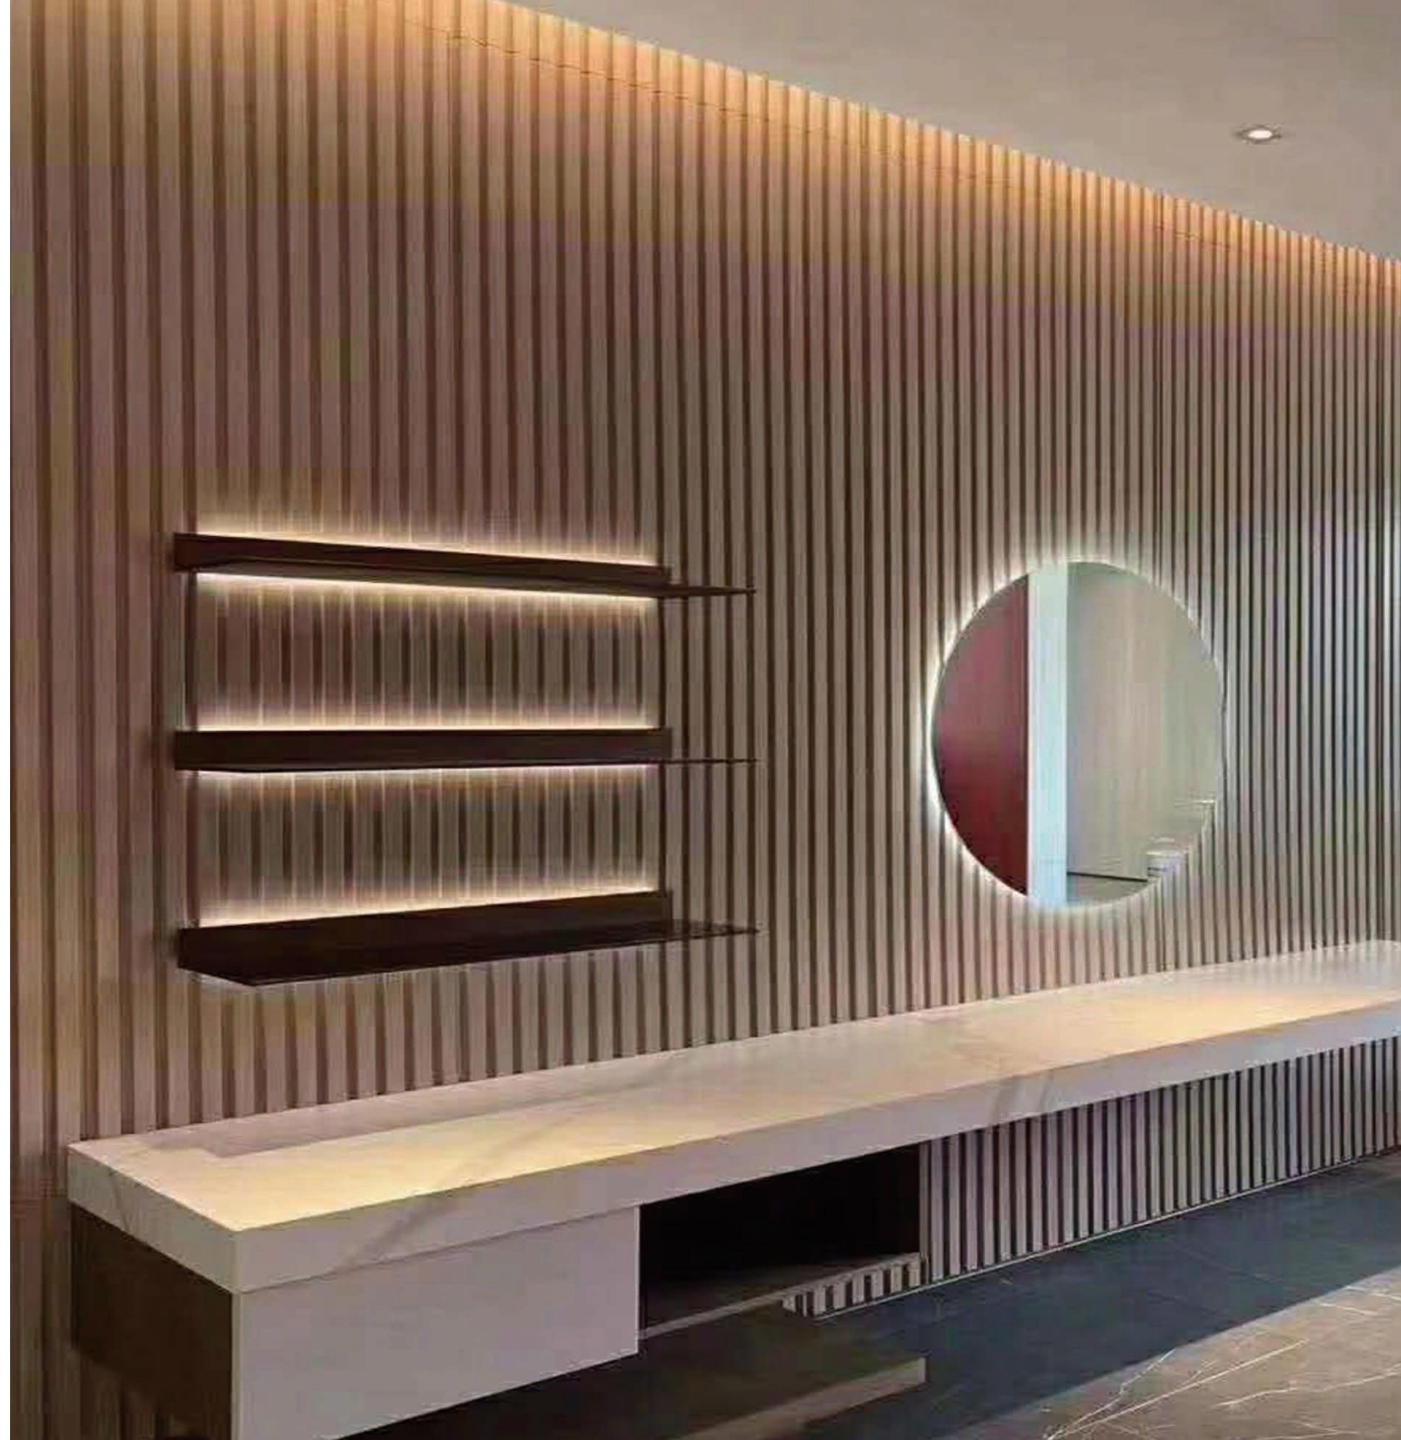

Production technology and product ingredients

The production process

The production adopts advanced extrusion technology and extrusion molding at high temperature, using FUR hot melt extrusion molding imported from Japan at high temperature 180 degrees!

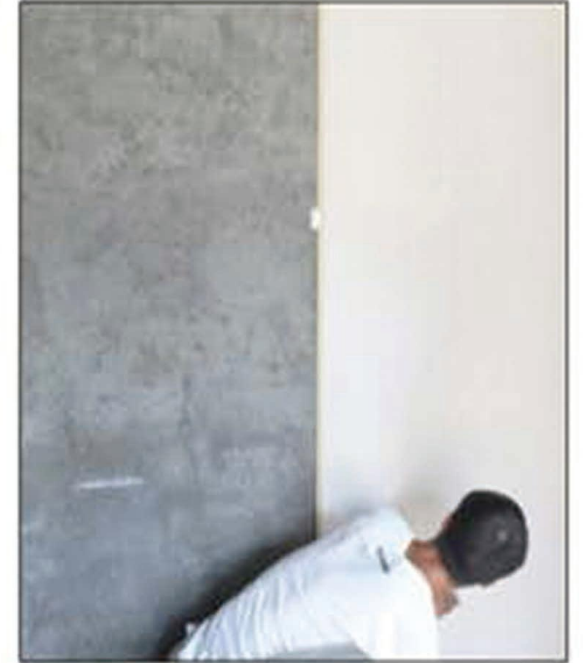

Product ingredients

It is made of bamboo powder, wood powder, calcium powder and high polymer resin.

WPC Wall Boards Installation

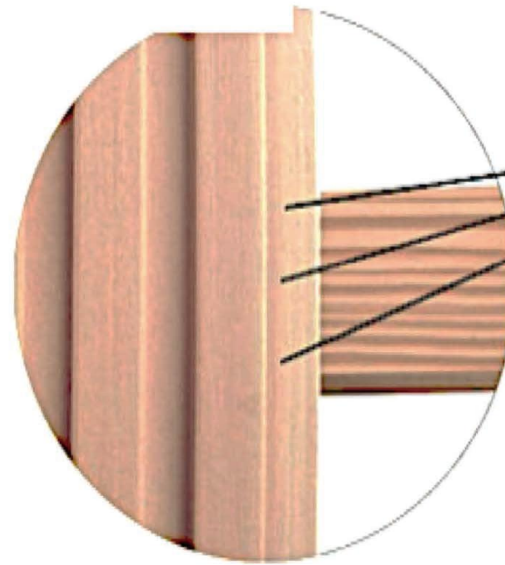

WPC products are widely used for interior decoration of hotel, restaurant, residential building, theater, meeting room, fitness room, cultural activity center, exhibition room etc. Two installation ways:

WPC Wall Boards Installation

1 For plain wall, insert stainless slip directly into panel and fixed onto the wall with self screw.

2. If wall is not plain enough, need to make a plain wall by wood frame, then fix stainless slip onto wood frame, finally insert wall panel into slip, panel is recycled by this way.

NAILING POSITION

It is better to drive the nail diagonally into the hard surface
The nail hun can be covered with another board that plugs in
It doesn' t affect the aesthetics
